NovaTech Solutions — Company Knowledge Base

1. Company Overview

NovaTech Solutions is a fictional technology consulting company that helps small and medium-sized businesses modernize their operations using software development, cloud computing, data analytics, and artificial intelligence.

Website: www.novatech.example
Email: contact@novatech.example
Business hours: Monday–Friday, 9:00 AM–6:00 PM IST
Headquarters: Pune, Maharashtra, India

The company provides technology consulting and implementation services. The website and contact details in this document are fictional and are used for demonstration purposes.

2. Products and Services

AI Chatbot Development

NovaTech builds AI-powered chatbots for customer support, frequently asked questions, lead qualification, and internal knowledge search.

Typical capabilities include:

- Natural-language conversations
- Retrieval-Augmented Generation (RAG)
- Business knowledge-base integration
- Lead information collection
- Human handoff for unresolved issues

Data Analytics

NovaTech helps businesses understand their operations through data cleaning, analysis, dashboards, KPI tracking, and reporting automation.

Cloud and Data Engineering

Services include data pipeline development, ETL/ELT workflows, cloud data storage, data integration, and workflow automation.

Custom Software Development

NovaTech develops web applications, REST APIs, and internal business tools tailored to client requirements.

3. Indicative Service Plans

These are fictional example prices for the demonstration chatbot, not real commercial quotations.

Starter AI Chatbot

Indicative price: ₹25,000 one-time

Includes a basic FAQ chatbot, one knowledge source, and a simple website integration.

Business AI Assistant

Indicative price: ₹60,000 one-time

Includes a RAG-based knowledge assistant, lead capture, and basic conversation analytics.

Enterprise AI Solution

Indicative price: Starting at ₹1,50,000

Includes customized workflows, multiple knowledge sources, access-control planning, and advanced integrations.

Final pricing depends on project scope, integrations, deployment requirements, and ongoing usage costs. The chatbot must not promise discounts or customized quotations without approval from a human representative.

4. Industries Served

NovaTech's demonstration services are designed for:

- Retail and e-commerce
- Healthcare administration
- Education and training
- Financial services operations
- Professional services
- Small and medium-sized businesses

These are target industries, not claims of existing customers or completed deployments.

5. Frequently Asked Questions

Q: What does NovaTech Solutions do?

A: NovaTech provides AI chatbot development, data analytics, cloud and data engineering, and custom software development.

Q: Can NovaTech build a chatbot using our company documents?

A: Yes. A knowledge-base chatbot can retrieve relevant information from approved company documents and use it to formulate answers.

Q: What is RAG?

A: Retrieval-Augmented Generation (RAG) retrieves relevant information from a knowledge source and provides it to a language model as context for answering a question.

Q: Can the chatbot collect customer leads?

A: Yes. With the visitor's consent, it can collect details such as name, business email, company name, and service interest for follow-up.

Q: How much does an AI chatbot cost?

A: The fictional Starter plan is ₹25,000, and the Business plan is ₹60,000. Enterprise solutions start at ₹1,50,000. These are indicative demonstration prices; final quotes require human confirmation.

Q: How long does implementation take?

A: Timelines depend on the scope, data readiness, integrations, and approval process. The chatbot should direct visitors to the sales team for a project-specific estimate rather than promise a fixed timeline.

Q: Does NovaTech provide customer support?

A: Support arrangements depend on the service agreement. Visitors should contact the sales or support representative for details about their specific project.

Q: Can the chatbot resolve complaints?

A: It can identify complaint-related messages and collect a brief description for escalation. It must not claim that a complaint has been resolved or a support ticket has been created unless the relevant system confirms that action.

6. Lead Qualification and Contact Process

Visitors interested in a service may be asked for:

- Full name
- Business email
- Company name
- Service of interest
- Brief project requirements

The chatbot should explain why it is collecting these details and obtain consent before saving them for follow-up.

Never request passwords, payment-card details, or other unnecessary sensitive information.

A lead is qualified for follow-up when the visitor expresses interest in a service and provides the required contact information with consent.

The chatbot must not claim that a representative has contacted the visitor until that has actually happened.

7. Complaints and Human Handoff

If a visitor reports a problem, the chatbot should:

1. Acknowledge the concern politely.
2. Ask for a brief description of the issue.
3. Collect only the information necessary for follow-up.
4. Explain that a human representative may need to review the matter.
5. Avoid claiming a ticket was created or an escalation completed unless confirmed by the relevant system.

For unresolved questions, pricing exceptions, contractual issues, or requests requiring authorization, the chatbot should recommend contacting a human representative.

8. Answering Rules for the AI Assistant

- Use this knowledge base as the primary source for company-specific answers.
- Do not invent services, prices, customer names, guarantees, or company policies.
- If the answer is not available in the retrieved information, say that you do not have enough information and offer human follow-up.
- Distinguish indicative prices from confirmed quotations.
- Do not reveal private lead information to other visitors.
- Never claim to have performed an action unless the backend confirms it.

End of knowledge base.
